

Index

A

Adeno-associated virus transduction.
See Channelrhodopsin-2

B

Bordetella pertussis toxin (PTX), 50
Brain recording. See Intracellular
recording, awake brain
Brain slice. See Channelrhodopsin-2;
Cholinergic signaling;
Feedforward inhibition;
Long-term potentiation;
Synapse

C

Calcium channels. See Voltage-gated
calcium channel
Ca_v. See Voltage-gated calcium channel
Cerebellar slice. See Feedforward
inhibition
Channelrhodopsin-2 (ChR2)
electrophysiology–optogenetic
combination studies
adeno-associated virus transduction,
163
applications, 165–166
disynaptic currents, 164
materials, 161–162
monosynaptic inputs, 165
rabies virus transduction,
162–163
recipes, 166
statistical analysis, 165
neuron stimulation studies with
heterologous expression
electroporation of single neurons
DNA preparation, 158
electroporation, 158–159
materials, 157–158
overview, 143
recipes, 160
hippocampal slice culture
preparation
dissection, 150–152
materials, 148–149
overview, 142
preparation, 149–150
recipes, 152

light stimulation

epifluorescence stimulation,
144–145
light fiber stimulation, 145
off-center illumination through
condenser, 145–146
transfection, 142
viral vector-based transduction
adeno-associated virus injection,
154–155
materials, 153–154
overview, 143
recipes, 155–156
optical activation studies, 4, 108,
141–142
red-shifted variants, 141–142
Cholinergic signaling
nicotinic acetylcholine receptor
cloning, 2
techniques for study, 108–110
thalamic reticular nucleus studies
brain slice preparation, 112
materials, 111–112
recipes, 115
recording, 113
setup for recording, 112
troubleshooting, 113–115
thalamocortical system acetylcholine
receptors, 107–108
ChR2. See Channelrhodopsin-2
CNG channel. See Cyclic nucleotide-gated
channel
CTX. See *Vibrio cholera* toxin
Cyclic nucleotide-gated (CNG) channel,
identification, 2

D

Dominant-negative mutant. See Voltage-
gated calcium channel

E

Epilepsy, voltage-gated sodium channel
mutations, 31–32
EPSC. See Excitatory postsynaptic current
Excitatory postsynaptic current (EPSC)
overview, 85–86
quantal size, 86
releasable pool, 87
release probability, 86–87

F

Feedforward inhibition
inhibitory interneurons, 99–100
measurement
cerebellar slice preparation, 102
materials, 101–102
recipes, 105
spike timing effect studies, 104
troubleshooting, 104
whole-cell voltage-clamp recording,
102–104

G

Glutamate, uncaging, 4
Glycine receptor, single-channel recording
in human embryonic kidney
cells
data analysis, 82
materials, 79–80
pipette preparation, 80–81
recipes, 83
recording, 81–82
troubleshooting, 82–83
G-proteins. See Voltage-gated calcium
channel

H

HCN channels. See Hyperpolarization-
activated cyclic nucleotide-
gated channels
Hebbian plasticity, 117
Hippocampal slice. See Channelrhodopsin-
2; Long-term potentiation
Hyperpolarization-activated cyclic
nucleotide-gated (HCN)
channels
currents in neurons
overview, 64–65
recording
cell-attached recordings, 68–69
materials, 66–67
outside-out patch recording, 68
pipette preparation, 67
recipes, 70
whole-cell voltage-clamp
recording, 68
functional overview, 63
subunits, 63–64

I

- Inhibitory postsynaptic potential (IPSP), 98
 Inhibitory synapses. *See also* Feedforward inhibition
 history of study, 97–98
 inhibitory interneurons, 99–100
 neurotransmitters and receptors, 98–99
 Interneuron. *See* Feedforward inhibition;
 Inhibitory synapses
 Intracellular recording, awake brain
 freely moving animals
 craniotomy and target depth
 determination, 184
 habituation, 183–184
 headplate implantation, 183
 histology, 186
 materials, 180–183
 overview, 170–171
 painted patch pipette preparation,
 184
 patching and pipette stabilization,
 184–185
 recipes, 187
 recording, 185–186
 release of animal, 185
 troubleshooting, 186
 head-fixed behaving animals
 craniotomy and target depth
 determination, 176
 habituation to head fixation,
 175–176
 headplate implantation, 175
 histology, 177
 materials, 173–175
 overview, 169–170
 recipes, 179
 troubleshooting, 177–178
 whole-cell recording, 176–177
 IPSP. *See* Inhibitory postsynaptic potential

L

- Long-term potentiation (LTP)
 Hebbian plasticity, 117
 theta-burst stimulation in hippocampal
 slices
 field excitatory postsynaptic poten-
 tial recording, 122–126
 materials, 120–122
 overview, 118
 recipes, 127
 setup, 122
 troubleshooting, 125–126
 LTP. *See* Long-term potentiation

M

- mACHR. *See* Muscarinic acetylcholine
 receptor

- Muscarinic acetylcholine receptor
 (mACHR). *See* Cholinergic
 signaling

N

- nACHR. *See* Nicotinic acetylcholine
 receptor
 Nicotinic acetylcholine receptor (nACHR).
See also Cholinergic signaling

O

- Optogenetic activation. *See*
 Channelrhodopsin-2
 Optogenetic photoactivation, applications, 4,
 51–52

P

- Pasteurella multocida* toxin (PMT), 50
 Plasticity. *See* Long-term potentiation;
 Spike-timing-dependent
 plasticity
 PMT. *See Pasteurella multocida* toxin
 Potassium channel
 gating
 activation gating at
 bundle crossing, 10–12
 selectivity filter, 13
 inactivation gating
 C-type, 12
 N-type, 12–13
 overview, 7–8
 selectivity, 9–10
 voltage-gated potassium channel. *See*
 Voltage-gated potassium
 channel
 PTX. *See Bordetella pertussis* toxin

Q

- Quadruple whole-cell recording. *See*
 Spike-timing-dependent
 plasticity

R

- Rabies virus transduction. *See*
 Channelrhodopsin-2
 Resurgent current. *See* Voltage-gated
 sodium channel

S

- Single-channel recording
 applications, 77–78
 data analysis, 76–77
 experimental design, 73–75

- glycine receptors in human embryonic
 kidney cells
 data analysis, 82
 materials, 79–80
 pipette preparation, 80–81
 recipes, 83
 recording, 81–82
 troubleshooting, 82–83
 noise reduction, 75–76
 overview, 73
 setup, 75

- Sodium channel. *See* Voltage-gated sodium
 channel

- Spike-timing-dependent plasticity, quad-
 ruple whole-cell recordings in
 neocortical slices
 connected neuron identification, 132
 data analysis, 133–135
 materials, 129–131
 overview, 118–119, 137–138
 patch-clamping, 131–132
 plasticity induction, 132–133
 recipes, 138
 setup, 131
 troubleshooting, 136–137
 Synapse. *See also* Cholinergic signaling;
 Inhibitory synapses
 brain slice preparation for voltage-
 clamp studies
 dissection, 91
 electrode alignment, 91–92
 materials, 89–90
 recipes, 94–95
 seal formation, 92–93
 slicing, 91
 synaptic stimulation, 93
 troubleshooting, 93–94
 excitatory postsynaptic current
 overview, 85–86
 quantal size, 86
 releasable pool, 87
 release probability, 86–87
 physiological properties, 85
 plasticity. *See* Long-term potentiation;
 Spike-timing-dependent
 plasticity

T

- TEA. *See* Tetraethylammonium
 Tetraethylammonium (TEA), 1
 Tetrodotoxin (TTX), 1–2
 Thalamic reticular nucleus. *See* Cholinergic
 signaling
 Transient receptor potential (TRP) chan-
 nel, identification, 3
 TRP channel. *See* Transient receptor
 potential channel
 TTX. *See* Tetrodotoxin

V

VGSC. *See* Voltage-gated sodium channel

Vibrio cholera toxin (CTX), 50

Voltage-gated calcium channel (Ca_v)

calcium-dependent modulation

measurement

calcium-dependent facilitation

measurement, 42–43

calcium-dependent inactivation

measurement, 41–43

materials, 39–40

recipes, 43–44

transient transfection, 40

whole-cell voltage-clamp recording,

40–41

G-protein modulation

dominant-negative mutant studies,

51

$\text{G}\alpha$ -dependent pathway

identification, 51

$\text{G}\beta\gamma$ -dependent pathway

identification, 50–51

G-protein cycle, 45

G-protein family identification, 50

knockdown studies, 51

optically-activated G-protein

coupled receptors, 51–52

overview, 45–47

superior cervical ganglion neuron

analysis from rats

flow-induced artifact sources,

58–59

materials, 54–56

neuron dissection and

dissociation, 56–57

recipes, 60–61

recording solutions, 59–60

whole-cell calcium current

measurement, 57–58

tools for study, 47–49, 58

Voltage-gated potassium channel

coupling between voltage sensor and

channel gate, 16–17

structure, 14–16

voltage sensing, 13, 15

voltage sensor movement

conformations, 16, 18–19

molecular dynamics simulations,

19

Voltage-gated sodium channel (VGSC)

activation studies, 25–27

beta-subunit

cell adhesion and neural outgrowth

regulation, 30–31

functional overview, 24–25

resurgent current effects of $\beta 4$, 30

surface expression modulation of

alpha-subunit, 29–30

diversity, 27–29

history of study, 23–24

pathophysiology

cancer, 32–33

epilepsy, 31–32

posttranslational modifications, 29

prospects for study, 33–34

structure, 24–27
