- Sar1, 136, 266–267, 314
- Sec12, 266
- Sec13, 283
- Sec13/Sec31 complex, 266–267
- Sec16, 137
- Sec23/Sec24 complex, 266–267, 271
- Sec24, 267
- Sec59, 250
- Sec61, 53–54, 135, 223, 239–240
- Sec62/Sec63 complex
  - cotranslational translocation role, 243
  - posttranslational translocation role, 242–243
- Sec62p, 135
- Sec63p, 135
- SecA, 241
- SecE, 241
- SecY, 239, 241
- SecYE $\beta$ , 240–241
- SecYEG, 241–242
- Sed5, 272
- Seh1, 281–282, 284
- SEL1L, endoplasmic reticulum-associated degradation role, 34–35
- Semliki Forest virus, endoplasmic reticulum role in replication and assembly, 148–149
- SGA. *See* Synthetic genetic array
- Sgt2, 224, 230
- Shiga toxin (ST), endoplasmic reticulum utilization during entry, 148
- Signal recognition particle (SRP)
  - ribosome and messenger RNA targeting to rough endoplasmic reticulum, 236–237
  - ribosome–nascent chain complex delivery to translocation channel, 237–238

## Index

- Signal recognition particle (SRP) (*Continued*)  
  signal recognition particle–signal recognition particle  
  receptor targeting pathway, 238–239
- Signal sequence, cleavage, 64–65
- Sly1, 272
- SNAREs, 272, 301, 303, 313, 315, 317, 319
- Sphingolipids  
  functional overview, 207–208  
  mitochondrial incorporation, 122  
  modes of action, 208–209  
  nonvesicular lipid transport, 199–200  
  regulation of homeostasis  
    prospects for study, 218–219  
    sensing of sphingolipids, 215–218  
    synthesis, 212–214  
    transport and turnover, 215  
  structures, 208  
  synthesis, 119–120, 194–195, 209–211  
  turnover and degradation, 211
- SPOTS complex, 213
- Sr $\alpha$ , ribosome–nascent chain complex delivery to trans-  
  location channel, 237–238
- SREBP. *See* Sterol response element binding protein
- SRP. *See* Signal recognition particle
- SRP54, ribosome–nascent chain complex delivery to  
  translocation channel, 237–238
- ST. *See* Shiga toxin
- StAR. *See* Steroidogenic acute regulatory protein
- START, 192, 200
- Steroidogenic acute regulatory protein (StAR), 120, 200
- Sterol response element binding protein (SREBP), 12, 26
- Sterols  
  mitochondria  
    import, 120–122  
    localization, 119  
  nonvesicular lipid transport, 200–201
- STIM1, 96–99, 102
- STIM2, 102
- Synthetic genetic array (SGA), endoplasmic reticulum  
  studies, 167–168
- Systematics, endoplasmic reticulum. *See also* Proteomics  
  chemical interaction maps, 168–169  
  genetic interaction maps, 167–168  
  overview, 161–163  
  prospects, 170  
  stress signaling studies, 165–166
- Tail-anchored membrane proteins. *See* GET pathway
- TANGO1, 267–268
- TFG-1, 269
- TPN. *See* Trafficking proteostasis network
- TRaCKS, 294, 298–300
- Trafficking proteostasis network (TPN), 292, 294, 296–303
- Translocation channel. *See* Protein translocation, rough  
  endoplasmic reticulum
- TRAPP, 270–273
- Trs23, 271
- Trs31, 271
- UBAC2, endoplasmic reticulum-associated degradation  
  dislocation role, 39–40
- Ubc7, 55
- Ubdx1, 300
- Ubiquitination  
  E2 ligases in yeast endoplasmic reticulum-associated  
  degradation, 55  
  E3 ligases in endoplasmic reticulum-associated  
  degradation
- mammals  
  cooperativity, 40–41  
  types, 40  
  yeast, 49–50  
  ubiquitin proteasome system in cargo-specific TRaCKS  
  biology, 300–301
