Benfey, Philip N.

Quickstart molecular biology: an introductory course for mathematicians, physicists, and computational scientists / Philip N. Benfey, Duke University.

pages cm

Summary: "This book is an introductory course in molecular biology for mathematicians, physicists, and engineers. It covers the basic features of DNA, proteins, and cells but in the context of recent technological advances, such as next-generation sequencing and high-throughput screens, and their applications. This enables readers to move rapidly from the basics to an understanding of cutting-edge research in systems biology and genomics"--Provided by publisher.

Includes bibliographical references and index.

Acknowledgments, vi

About the Author, vii

- 1 Introduction, 1
- 2 DNA: How Cells Store Information, 3
- 3 Gene Expression: How Cells Process Information, 27
- 4 Cells and Cellular States, 45
- 5 Proteins and Signaling: How Cells Regulate Information Flow, 67
- 6 Networks Controlling Biological Oscillators, 89
- 7 Transcriptional Networks in Development, 103
- 8 Understanding Complex Traits, 109
- 9 Networks in Human Evolution, 121
- 10 Quantitative Approaches in Biology, 129

Suggested Further Reading, 131

Glossary, 133

Illustration Credits, 149

Index, 151

# Acknowledgments

---

THERE ARE MANY PEOPLE TO thank when a book of this nature makes it to publication. Gary Carlson, former editor at Prentice Hall, commissioned the book and then was remarkably patient as it arrived in dribs and drabs. He provided insightful editing and guidance, and, when he announced his upcoming retirement, I realized I better finish it up. The editorial staff at Cold Spring Harbor Laboratory Press have been highly professional and efficient. Courtney Babbitt and Steve Haase contributed portions of the chapters on human evolution and biological oscillators, respectively, and Heidi Cederholm wrote a first draft of the glossary. The students in my class at Duke used earlier versions of this work as a textbook and provided helpful comments and feedback. During the six-plus years from conception to completion of this book, research in my laboratory was funded from a number of sources, including the National Institutes of Health (NIH), National Science Foundation (NSF), Defense Advanced Research Projects Agency (DARPA), Gordon and Betty Moore Foundation, and Howard Hughes Medical Institute. Finally, my deepest gratitude for the understanding and support of my wife, Elisabeth.

# About the Author

---

**P**HILIP BENFEY IS the Paul Kramer Professor of Biology and an Investigator of the Howard Hughes Medical Institute at Duke University, Durham, North Carolina, USA. His research focuses on plant developmental genetics and genomics. He is a fellow of the American Association for the Advancement of Science and a member of the U.S. National Academy of Sciences. Dr. Benfey received his Ph.D. from Harvard University and a DEUG (Diplome d'Etudes Universitaire Generale) from the University of Paris.
